

Pupil Premium

2019 - 2020

Pupil Premium spending at Elm Tree School incorporates the aims and values of our school mission statement. *'Believe to Achieve'* is rooted in our belief that every child is unique and that this is reflected in the desire, commitment and aspirations of our school staff to address and overcome all barriers to learning which may hinder pupil progress and attainment, and ultimately affect their life chances. At Elm Tree School we believe in partnerships rather than projects. Individual short-term projects and interventions can have an impact on pupil learning and we have been engaged in some of those, but our main driver is the notion of longer term partnerships, where we work together to design and develop learning opportunities, experiences and individual therapy approaches to remove barriers to learning for all children. When our children join our community they often lack that urgency for learning and inspiration to achieve and so we use the (Pupil Premium) grant to provide a wide range of additional opportunities to increase lifelong aspiration for all. Our extensive programme of residential and enrichment opportunities are examples of sustainable long term developments that increase lifelong aspirations for all.

Aims

To provide all pupils with fair and equal opportunities to achieve and excel in all areas of the curriculum; using and applying the most effective pedagogy, supported by use of additional, delegated funding.

To work in partnership with families and pupils eligible for pupil premium, to plan, monitor and evaluate support and intervention in order to secure individual progress and achievement by removing barriers to learning.

To work with internal and external partners and organisations to provide additional support for the social, emotional, health and wellbeing of all pupils with potential barriers to learning and achievement.

To ensure governors fulfil statutory responsibilities to make effective use of pupil premium funds in order to impact positively on pupils' achievement and attainment.

Funding for 2019/2020

Total number of children eligible for Pupil Premium funding – Ever 6		
Total number of children eligible for Pupil Premium plus funding £1,800 This funding is applied for termly and accounted for through the PEP review		
	Total	£85,000

Objective - To embed effective multi-disciplinary holistic therapeutic intervention across school to enhance pupil progress.

This objective will be met by:

- Providing multi-disciplinary assessment (SALT, OT, Counsellor) for all children in school, to ensure every child's therapy needs can be identified and met.
- Provide THRIVE assessments for each child in order to identify their emotional development and individual needs so that individual support programmes and interventions can be put into place.
- Implement THRIVE actions to promote SEMH development and impact behaviour across the school.
- Increasing parental involvement within children's therapy services in school through: providing individual therapy advice and strategies for home as required and increasing parental understanding of child development and mental health and the impact they have on learning and behaviour.
- Identify families who need assistance and advice from the school Parental Support worker and provide this support in the form of home visits and parenting programmes in order to improve attendance and behaviour.
- Providing additional 1:1/small group therapy for children whose specialist needs cannot be met within Therapy Enrichment alone, including support to build children's confidence and self-esteem, language and communication, motor development and co-ordination and sensory regulation.
- Provide training from therapy staff to enable high quality TA interactions and allow classroom staff to provide 1:1 and small group interventions on a more regular basis.
- Provide training from therapy staff to enable high quality TA interactions for them to fully understand individual children's needs and be able to implement individual programmes outside of 1:1 therapy sessions.
- Providing 1:1 therapeutic counselling sessions to promote emotional resilience, safety and self-regulation for identified children within school, including those in crisis.
- Development of play based learning classes for children who cannot access more formal classrooms, allowing for more specialised curriculums.

- Converting an area into a soft play area in consultation with our OT in order to support sensory needs and ensure progression in gross motor skills.
- Delivering staff training/CPD (e.g. through teacher meetings/twilights) to ensure that staff are confident to support all children's emotional, sensory and developmental needs across the day.
- Close links between the therapy team and EYFS department to ensure early intervention to improve outcomes for children moving forward in school.
- Providing specialised classes for children who have needs that cannot be met within a formal classroom.

Rational based on evidence from EEF and DfE

Research has shown that children with special educational needs and disabilities (SEND) can face significantly greater challenges than their peers, which in turn leads to large attainment gaps between them. The impact of SEND on academic attainment is closely related to the EEF's focus on economic disadvantage: 27% of pupils with special educational needs are eligible for free school meals compared to 12% of pupils without special educational needs. Current statistics mainly reflect the primary type of need for an individual, however it has been found that many are likely to have multiple needs. Based on assessment data from the last academic year it was found that 61% of children who attended Elm Tree had Speech and Language difficulties and needed targeted support in this area.

Speech and language difficulties are a key issue across the education sector with evidence showing that these difficulties are more common in children who have behavioural difficulties (Norbury et al., 2015) and those from lower socio-economic backgrounds (Meschi et al., 2012). Research has shown that difficulties with emotions and behaviour is inextricably linked to language difficulties, possibly due to problems understanding instructions and communicating views. This leads to children communicating in other ways which may be presented as difficult behaviours. Children who receive specialist treatment from a Speech and Language Therapist (SaLT) has been shown to be highly effective with children under this care showing better literacy skills (Kirk & Gillon, 2007). It has also been found that classroom support can also benefit children and that trained teaching assistants who provide therapy in consultation with SaLTs are able to have an impact on a child's progress, improving oral language skills of those children at risk. These key findings show the importance of high quality training for support staff from a qualified professional who understands the ethos of the school and the reasons for this approach.

Occupational therapy is a health profession in which therapists and therapy assistants help individuals to do and engage in the specific activities that make up daily life. For children and youth in schools, occupational therapy works to ensure that a student can participate in the full breadth of school activities—from paying attention in class; concentrating on the task at hand; holding a pencil, musical instrument, or book in the easiest way; or just behaving appropriately in class. Within a school environment OT practitioners do not simply focus on a specific issue that may be presented but instead look at the whole child and provide interventions which focus on individual tasks in order to help a child to find ways to do the things that they need/want to do.

In the SEND Code of Practice sensory and/or physical needs are categorised as one of the four broad areas of need and support. Although there have been few studies into the correlation between SEMH and motor

impairment, the studies that have taken place have suggested that there is an increased prevalence in motor difficulties amongst children and young people with SEMH difficulties (E. Hill et.al., 2017). This, in turn, has an effect on the ability of children to successfully take part in classroom activities. Over the last academic year at Elm Tree all new children have been assessed by our Occupational Therapist, with a significant focus on our play based classes, which provide an EYFS curriculum for those children whose needs require this and our specialist classes, including a predominantly ASD class. A high level of need was found in these classes; 85% of children were identified as having significant need and of these 75% were in the 0.5 centile and 50% in the 0.1 centile. These needs included difficulties with sensory processing, cognitive development, skill development and engagement in the activities that are typical for children of that age, such as self-care and play. The impact of sensory processing, coordination, sensorimotor difficulties or impairment of the senses not only hinders learning and cognition but can have a pervasive and serious effect on the emotional wellbeing of children and young people, and further impacts life chances in adulthood (Gagnon-Roy 2016).

Many children who need interventions in this area need input from professionals who can help a child to achieve a purposeful activity or functional outcome. In the previous academic year our school OT has provided specific interventions for a total of 28 pupils and worked collaboratively with teachers and parents to offer interventions based on assessment. Studies have shown that the teaching principles associated with physical and occupational therapy underpin motor skill acquisition, such as being able to give clues to adjusting body position in order to perform a task or sharing knowledge about executing movement in a certain way. Moving forward our OT will provide even more high quality training for teaching assistants and teachers in order to help to implement interventions within classroom environments and ensure that staff are able to help children with atypical development to participate in educational activities.

Difficulties with sensory processing has a huge impact on daily life skills and is common in a number of conditions, including ASC, ADHD, developmental coordination disorder and sensory processing disorder. These issues can be difficult to identify, requiring a professional to determine. Our OT has assessed children within the setting and has made adaptations to the environments in order to reduce sensory reactivity, e.g. ear defenders, chew buddies, textured materials etc.

Due to the nature of these difficulties, a child's sensory profile is specific to the individual and therefore it is not possible to provide a 'one size fits all' model. Recognising how specific aspects of a child's sensory reactivity impacts on their education, social awareness and daily life can channel precise support where it is necessary. Through discussions with professionals and assessments our OT is able to focus on individual profiles and work with class teams to help integrate these children into classroom life and alleviate the many demands on the child as they sit in a lesson, even before they begin to learn.

Social, Emotional and Mental Health difficulties is an overarching term for children and young people who demonstrate difficulties with emotional regulation and/or social interaction and/or are experiencing mental health problems. Children and young people who have difficulties with their emotional and social development may have immature social skills and find it difficult to make and sustain healthy relationships. These difficulties may be displayed through the child or young person becoming withdrawn or isolated, as well as through challenging behaviour. Many more students are likely to have social, emotional and mental health needs that are secondary to other types of SEND, and educators should be alert to these needs in students with all types of SEND. At Elm Tree we as a whole school initiative: THRIVE; to allow us to assess each child's developmental stages in social and emotional development. These assessments lead to action plans for each child to ensure that their SEMH needs are being met within class and that they are able to make progress in these areas. Children who require individual support are also identified from this assessment.

SEND Code of Practice (2015) highlights the vital role that parents play in supporting children and young people with SEND. Parents of students with SEND may require additional support from educational settings in order for them to feel comfortable to be open and honest about their child's needs. Parents are often required to take on an 'advocate' role for their child and this can be a time consuming and emotionally laden responsibility. They may also have different concerns to other parents, for example, they may be more worried about whether their child is safe in school or college, whether they are making friends or what other parents may think of their child, rather than focusing on academic performance. At Elm Tree we have employed the services of an Outreach Parental Support Worker, with the aim of providing support for parents who may be finding it difficult to deal with a child's behaviour, to engage parents and encourage them to become partners in their child's education.

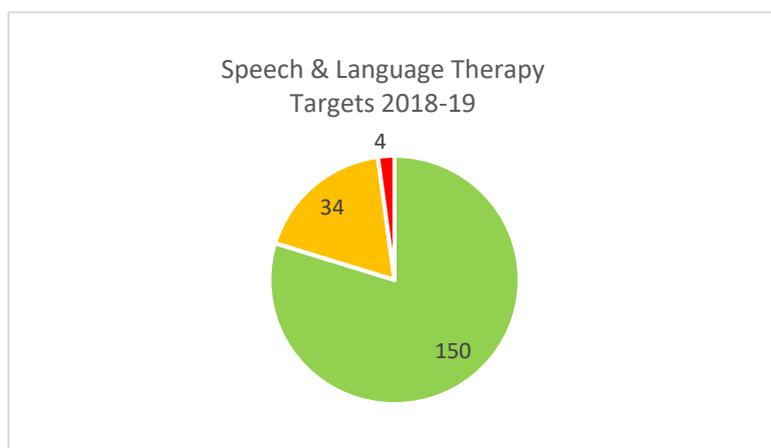

How effective is it?

In our SALT department:

Of the 188 targets set for the year for 41 children:

150 targets were achieved

34 were partially achieved

Our OT had individual sessions with 28 children, all of whom made significant progress to their EHCP targets. Evidence indicates that one to one intervention can be effective, on average accelerating learning by approximately five additional months' progress.

Short, regular weekly sessions over a set period of time (6-12 weeks) appear to result in optimum impact. Evidence also suggests tuition should be additional to, but explicitly linked with, normal teaching, and that teachers should monitor progress to ensure the tutoring is beneficial.

Costing

Staff Member	FTE	Cost
SALT	0.6	£22,800
Occupational Therapist	0.6	£29,520
School Counsellor	0.6	£16,236
SALT Assistant	0.6	£16,068
		£84,624

How will impacted be measured? Or expected impact?

Impact will be measured through:

- Review of children's therapy targets throughout the year to ensure targets are met.
- Re-assessment of children's developmental needs as appropriate.
- Monitoring of children's social and emotional development using the Thrive Assessment.
- Improvements in the school environment evident within a sensory and communication friendly environmental audit.
- Staff report increased knowledge, understanding and confidence in supporting children's developmental needs.
